

Cyber Resilience: Minimise risk, help your business run more smoothly and improve your peace of mind.

As the digital economy picks up speed and remote working proliferates, there's a different cyber-threat landscape emerging. The latest attack vectors and hacking tactics herald a new reality for business, and LIMA's cyber security service is grounded in that reality.

Stay one step ahead with LIMA's comprehensive seven-step roadmap to cyber risk reduction

- Whether you're in a strictly regulated industry, or a business with a low appetite for risk, or just looking to elevate your existing security footprint, a cyber resilience review from LIMA helps you plan for tomorrow's challenges.
- LIMA works collaboratively and transparently alongside your IT people and wider team to gain a comprehensive view of your IT architecture and operating procedures, and identify the key risks associated with your IT services – including your people, processes and technology.

Benefits of this service

- Know your risks across people, processes & platforms

- Provides an effective corporate risk register

- Roadmap to risk reduction

- Benchmarked against Cyber Essentials Plus & ISO27002

The 3 pillars of cyber security.

Every LIMA roadmap contains a proposed risk action plan, starting with any urgent, tactical work to be carried out as a priority. We give you the information, the insights and the tooling to target the gaps in your security plan. From there you can detect threats and respond to them, from ransomware to cyber-attacks.

Importantly, your roadmap covers not just your platform, but your people and the processes that support them.

People

- Information security policies
- Education
- Behaviour monitoring, control and protection

Process

- IT operating procedures
- Business continuity planning approach
- Threat detection and security assurance
- Asset control

Platform

- End user computing
- Housing, cloud and networks
- Security technology

LIMA has some of the brightest minds in cyber resilience in our dedicated team. We empower your IT leadership and the wider executive group with a detailed, effective corporate risk register benchmarked against Cyber Essentials Plus and ISO27002s.

LIMA's core cyber security services

Protect and manage

LIMA assesses the security of your IT infrastructure from multiple angles using expert insights. We establish ongoing controls to neutralise potential threats and adapt as threats get more sophisticated.

- Understand who currently accesses your data, and how
- Prioritise the most valuable or vulnerable areas of your infrastructure
- Ensure security updates happen reliably and efficiently
- Keep data protected during transfer
- Embed resilience at a technical level in business-critical areas, with controls appropriate to your organisation's risks
- Harness the power of cloud-based backup

Detect, Identify, Respond

Our managed vulnerability assessment service (MVAS) helps you identify vulnerabilities and risk priorities, with advice on remediation to keep you secure and compliant. Managed detection and response (MDR) gives an enterprise-grade cyber security capability at a fraction of the cost of building inhouse. Extended detection and response (EDR) and pentesting complete the package.

- Prevent threats targeting host devices - laptops, servers and desktops
- Harness human expertise, threat intelligence as well as network and endpoint detection technologies
- Expect monthly run reports as well as executive and technology level reporting for remediation on a per asset basis

How do you ensure you maintain a strong, continuous cyber posture into the future, and keep your data and reputation secure? **With support, guidance and advice from LIMA.**

Experienced

25+ years delivering value as the IT partner of choice for the UK's most ambitious organisations.

Independent

Broad IT skills across multiple technologies to provide the best solutions for public and private sectors.

Dependable

Proven track-record of IT deployment across industry.

Insightful

A forward-thinking IT partner combining insight, expertise and technology to deliver sustainable results.

Delivery

We do whatever it takes to help achieve resilience, optimisation and growth through technology.
